REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The combination of a turbomachinery chromium steel shaft containing 9% to 12% by weight chromium together with an inner, coaxial casing containing 1% to 2% by weight chromium is deemed unobvious as each of the cited references below teach away from the combined chemical compositions.

U.S. Patent Application Publication 2001/0021346 teaches in one embodiment, a shaft with a 10.5% to 11.5% by weight chromium composition, but also teaches the inner casing having a 8% to 9.5% by weight chromium composition. The other embodiments similarly teach away from the claimed combination.

U.S. Patent No. 5,749,228 teaches a low pressure stage having low chromium compositions for both the inner casing and shaft, and a high and intermediate stage having high chromium compositions.

EP 0 759 499 teaches the chromium content of the inner casing being 8 to 9.5% by weight.

U.S. Patent No. 6,224,334 teaches the chromium content for the shaft being either 1.51% by weight, else 1.24% by weight.

Finally, EP 0 767 250 teaches the casing having a chromium composition between 8 and 12% by weight.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
